UiPath Certified Professional

UiPath RPA Associate v1.0 Practice Test

Below is the scored review of your practice test. Only questions marked as incorrect are shown.

---

1 What is the correct sequence of Queue Item statuses if all statuses are involved in the transaction execution of a Queue Item?

Instructions: From the drop-down list, select the correct sequence number in which each status occurs.

> ## Explanation
>
> Topic: Identify and describe how UiPath Orchestrator queues and assets are used

---

2 Which function is available with an attended robot?

Explanation

Topic: Describe the processes suitable for automation and the processes executed with the different robot types; for example, attended versus unattended

---

13   A developer has created an automation process that includes:

1. Main.xaml file:

[ ] Sequence

Invoke SuperMarket workflow

Workflow file name

"SuperMarket.xaml"

Import Arguments   1   Open Workflow

Write Line

Text   Fruits

| Name	Variable type ^	Scope	Default
Fruits	String	Sequence	"Apple"
Create Variable			

2. Main.xaml file invokes the SuperMarket.xaml workflow using the following argument:

Invoked workflow's arguments

Name	Direction	Type	Value
in_ShoppingBasket	In	String	Fruits
Create Argument			

OK   Cancel

3. Detailed SuperMarket.xaml sequence and right-hand side of the Assign expression is shown below:

Based on the information shown in the graphics, what is the output of the Write Line activity in the Main.xaml file?

Explanation

Topic: Describe the functions and differences between variables and arguments; including how arguments are used, managed, and best practices

16   A developer has added an Invoke Workflow File activity in Main.xaml to invoke the
           ProcessInvoices.xaml workflow. The developer needs to pass a DataTable called **dt_Invoices** from
           Main.xaml to ProcessInvoices.xaml.

           Which action needs to be performed?

Explanation

Topic: Explain how to use Control Flow activities and workflow types such as sequences and flowcharts

---

23   A developer needs to design a process in the following way:

1. The process needs to validate the **Payment Status** field in an application.
2. There are three possible values in the **Payment Status** field named: **Pending**, **Paid**, or **Awaiting Approval**.
3. For "Pending", the process should check the "Due Date" field. If the Due Date has lapsed, raise an alert. Otherwise, do nothing.
4. For "Paid", change the **Overall Status** to **Completed**.
5. For "Awaiting Approval", send an alert email to the email address in the **Account Owner** field.

Based on best practices, which activity is recommended for designing the process flow for Step 2?

Explanation

Topic: Identify and describe the various Control Flow activities such as If, Switch, While, DoWhile, For Each, etc.

---

24   What describes the file access level needed when using the Workbook Read Range activity?

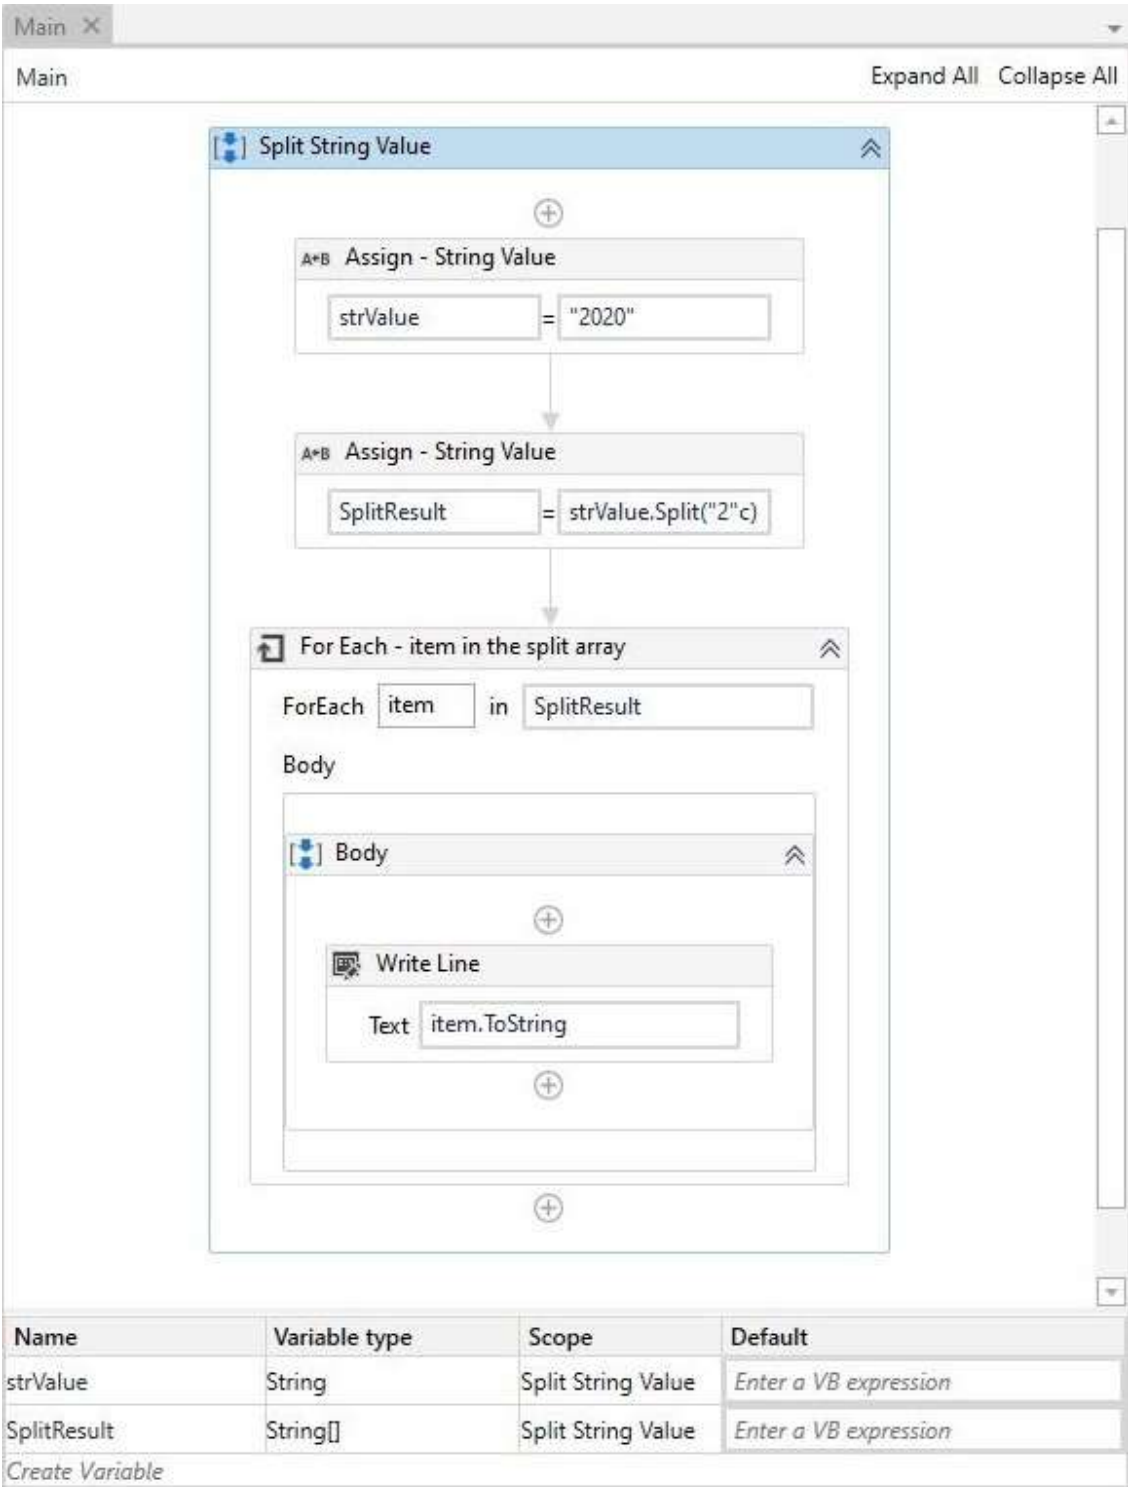

Explanation

Topic: Identify and describe Microsoft Excel and datatable functions, and how Excel activities are used for data manipulation

---

26   What is a feature of the Native screen scraping method?

> ### Explanation
>
> Topic: Describe the functions used to extract data from a .pdf file; for example, reading native text or using OCR

27 Review the following graphic:

Based on the graphic, what is the output at runtime?

Explanation

Topic: Describe the importance and reasons why data manipulation is used; for example, conversion from
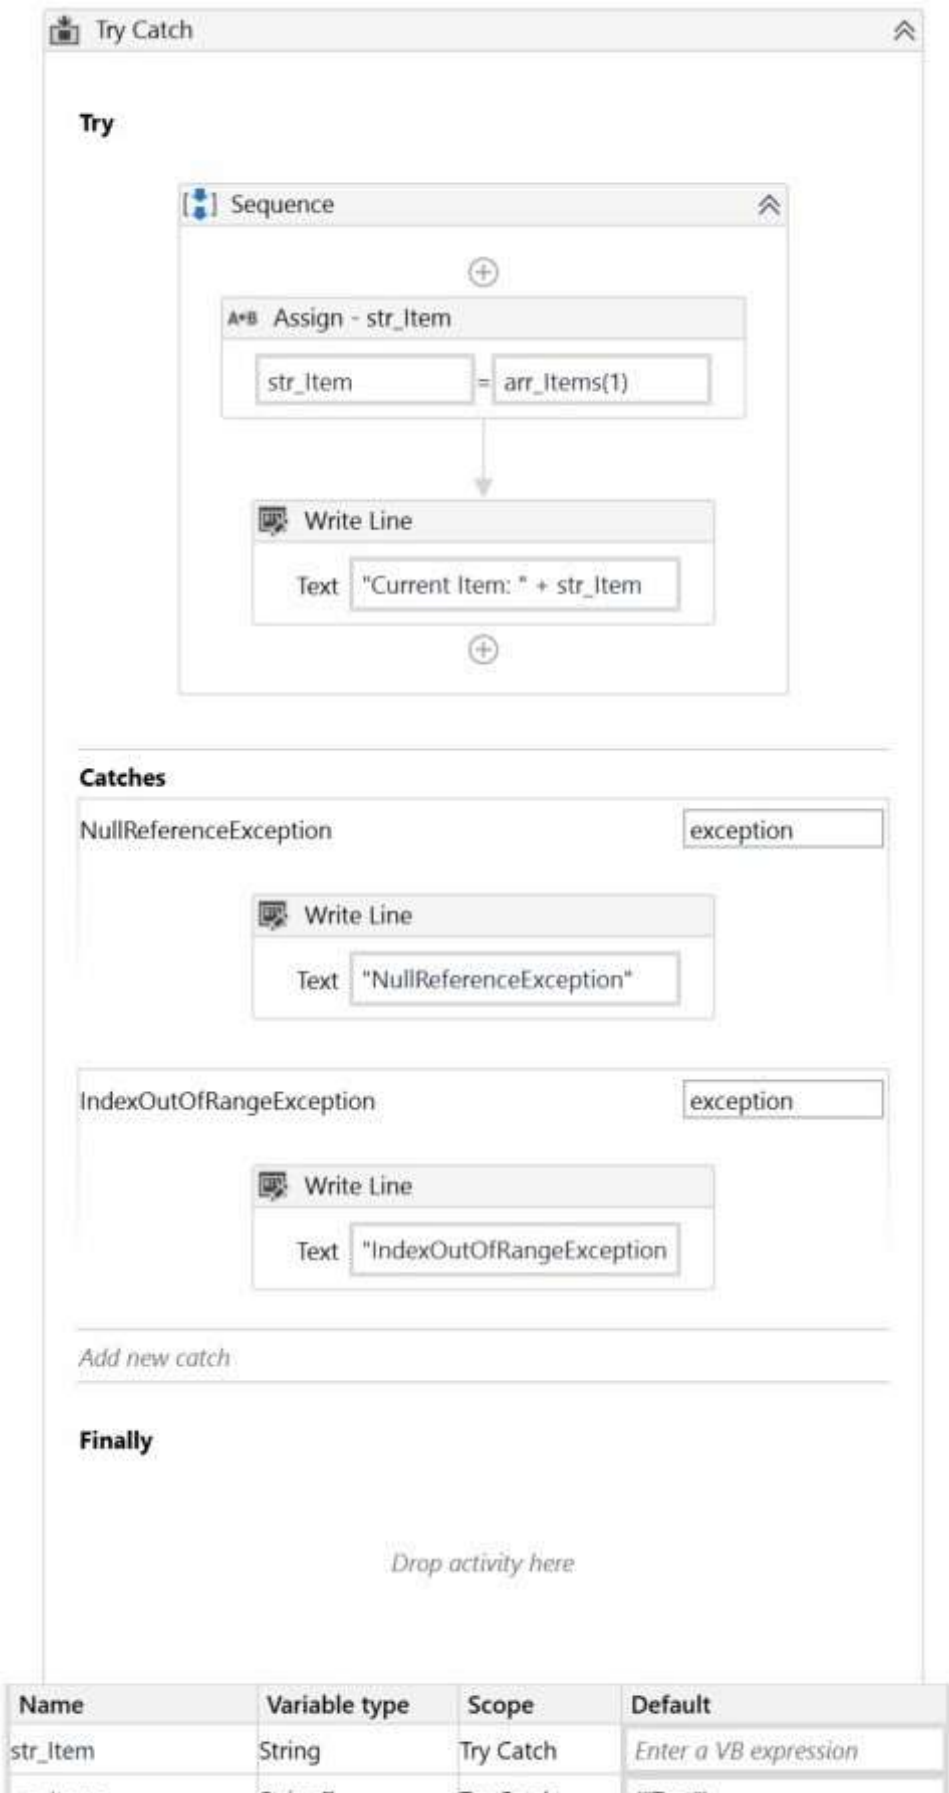

one data type to another data type

28 A developer wants to build a project which iterates through multiple digital PDF invoice files to retrieve the Total Value. Assuming all the files have the same structure, which action should be performed based on best practices?

Explanation

Topic: Describe the functions used to extract data from a .pdf file; for example, reading native text or using OCR

29   Review the following graphic:

Name	Variable type	Scope	Default
str_Item	String	Try Catch	Enter a VB expression

| arr_Items | String[] | Try Catch | ["Test"] |

Based on the graphic, what is the output of the workflow?

Explanation

Topic: Explain the importance of error handling and how it can be implemented

---

| arr_Items | String[] | Try Catch | ["Test"] |

31 When using an Excel Application Scope activity, which activity should be used to sort a table directly in an .xlsx file?

Explanation

Topic: Identify and describe Microsoft Excel and datatable functions, and how Excel activities are used for data manipulation

---

33   Based on best practice, how many Global Exception Handlers can be set per automation project?

Explanation

Topic: Explain the importance of error handling and how it can be implemented

---

37   A developer needs to create a variable to store the value of an email address. Which variable property
           or field is optional?

Explanation

Topic: Describe the different variables types, how they are used, managed, and the best practice for using
the variable scope

Practice Test Review - UiPath

40   Which data type does the Selector property of an activity accept?

Explanation

Topic: Identify and describe how dynamic versus static selectors are used

---

https://uipath.onlinetests.app/Assess.aspx?guid=B8493130A5E047CB8D64C8E819D339DC&a=R1   16/20

42   What is a characteristic of an Orchestrator Asset?

Explanation

Topic: Identify and describe how UiPath Orchestrator queues and assets are used

44 A customer calls into a Call Center to get an update on their current outstanding payment. Consider the following use case:

1. The customer provides the Customer ID to the call center representative.
2. The call center representative inputs the Customer ID into a web application.
3. The robot scrapes the data from the web application.
4. The robot performs calculations.
5. The outstanding amount is provided to the customer over the telephone by the representative.

What is the number of steps that require manual intervention?

> Explanation
>
> Topic: Describe the processes suitable for automation and the processes executed with the different robot types; for example, attended versus unattended

47 Which characters can be used as wildcards while editing a selector?

Explanation

Topic: Identify and describe how dynamic versus static selectors are used

---
